Shape Up For Summer - Part 3

DIAL UP BROAD BAND

JUNE 11TH, 2003

If you want to put your best face forward this summer, plastic surgeons have developed ways to give you a quick nip and tuck without the trauma. NY1 's Cheryl Wills has more in the final part of her series, "Shape Up for Summer. "

Read part one and part two of Cheryl's series.

Teresa Wiatrowska is ready to pucker up this summer. Since Mother Nature didn't give her full lips, her plastic surgeon will.

Renowned Midtown plastic surgeon Dr. Michael Evan Sachs has pioneered a new technique for lip enhancement. He calls it Autogenous Tissue Transfer, or ATT.

Dr. Sachs doesn't use collagen, fat injections or anything like that: he fills your lips with your own tissue. He says it lasts much longer than foreign substances.

"It's a minimum of five years before you see any resorbtion, and the reason it's so long lasting is because it's your own tissue, so it begins to grow in that area, and it's fresh," says Dr. Sachs.

About a month later, NY1 checked back in with our patient and Teresa Wiatrowska is thrilled with her new facelift and her new lips.
